Supporting children with vision loss

Every child is unique and they interact and learn in their own wonderful way. Much of what we learn in life is through watching, so children with vision loss gather information about their world in different ways.

The images in this book will help you understand what a child with low vision can see. It’s important to remember that low vision is individual to each child and to each eye condition.
What is visual acuity?

Visual acuity is the ability to see detail. Children are considered to be legally blind when they are unable to see at 6 metres a letter or symbol designed to be seen at 60 metres. In Australia it is expressed as a fraction between 6/6 and 6/60 or less for either near or distance vision.

The photographs in this booklet have been simulated to represent normal vision (6/6), moderate low vision (6/24), legal blindness (vision less than 6/60) and profound vision loss.

An eye specialist assesses visual acuity through a number of tests that may differ depending on the age of the child.
How can I help?

Low vision has a significant impact on the amount and quality of information that a child receives. Consequently a child’s development, education and ability to socialise with others may be impacted.

The following strategies can be used in your home and school environment:

• Provide maximum contrast between objects and backgrounds using bright plain colours.

• Reduce glare with curtains and blinds and ensure that the child’s back is to the window.

• Reduce clutter and pattern. It may be difficult to locate people and objects if the background is busy.

• Greet a child by name and say your name. Remember to bring your face close to their level to make identification easier.

• Provide time for children to look closely at objects and people, and to touch and explore so that they can add to their visual knowledge.
Poor contrast reduces the effective use of low vision and can make it more difficult to identify individuals.
**Good contrast** ensures the best use of vision. It enhances the child’s opportunities for communication and interaction.

Normal vision  Moderate low vision

Legal blindness  Profound vision loss
Poor contrast reduces visual information and may make it more difficult for a child to locate food, cutlery and plates.
**Good contrast** will encourage independence skills because of easier visual location.

Normal vision  

Moderate low vision  

Legal blindness  

Profound vision loss
**Books and story time**

**Poor positioning** and glare from windows reduces visual input for all children.

- Normal vision
- Moderate low vision
- Legal blindness
- Profound vision loss
Good positioning ensures that the background is not distracting and a diffuse light highlights the book and face of the adult.
Outdoors

Glare and contrast are particularly important to consider outdoors. Even cloudy days can be glary and reduce the efficient, confident mobility of children with low vision.

Normal vision – low contrast  Normal vision – high contrast

Profound vision loss – low contrast  Profound vision loss – high contrast
Background clutter can be visually distracting and it is important to view the environment from the children’s level to be aware of their perspective.

**Good contrast** is needed to encourage independent play and mobility.

How can Vision Australia help?

Vision Australia provides support and services to people of all ages and stages of life who are blind or have low vision.

We work with children, their families and support networks to help each child reach their full potential. We can help with learning and development during a child’s early years so they reach their developmental milestones and are school-ready. Our support continues throughout their primary and secondary school years so they can make a successful transition into adulthood.

With the support of our allied health team, professionals and specialist staff, we can develop strategies unique to every child, to help them grow into confident, healthy, independent adults and live the life they choose.
